

## Abstract

## A method of exchanging messages

First and second personal computer systems exchange messages using  
5 message exchange software. A message exchange interface window is  
displayed on a monitor of each computer. The window includes a message  
board for displaying messages, a text editor for entering and editing messages,  
a send button for posting a message to the message board and a plurality of  
predefined messages. The predefined messages allow users to communicate  
10 more quickly and converse more fluidly.
